STUDENT ASSESSMENTS
AND ASSOCIATED GROWTH MODELS FOR
TEACHER AND PRINCIPAL EVALUATION

PUBLICLY AVAILABLE SERVICES SUMMARY

This form will be posted on the New York State Education Department’s Web site and distributed through other means for all applications that are approved in conjunction with this RFQ to allow districts and BOCES to understand proposed offerings in advance of directly contacting Assessment Providers regarding potential further procurements.

| **Nature of Assessment:** | ☐ ASSESSMENT FOR USE WITH STUDENT LEARNING OBJECTIVES WITH A TARGET SETTING MODEL; OR
☐ SUPPLEMENTAL ASSESSMENT WITH AN ASSOCIATED GROWTH MODEL:
☐ GAIN SCORE MODEL
☐ GROWTH-TO-PROFICIENCY MODEL
☐ STUDENT GROWTH PERCENTILES
☐ PROJECTION MODELS
☐ VALUE-ADDED MODELS
☐ OTHER: |
<p>| <strong>What are the grade(s) for which the assessment can be used to generate a 0-20 APPR score?</strong> | Grades 1 to 6 |
| <strong>What are the subject area(s) for which the assessment can be used to generate a 0-20 APPR score?</strong> | English Language Arts (ELA) |
| <strong>What are the technology requirements associated with the assessment?</strong> | FAST™ is a web-based, hosted SaaS solution. As such, with no hardware or software to install, implementing FAST is simple. FAST requires no network or computer-based installation. Our cloud-based system is easy to implement and supported with optional automated rostering and SIS integration, nothing to install or maintain, and multi-platform and device support. The infrastructure requirements of New York Schools will be minimal. For optimal performance, schools must have sufficient bandwidth for the aReading Computer-Adaptive Tests. Performance testing has shown that 75Mbps of available bandwidth is optimal if a school district planned to test 500 students simultaneously on aReading. At this range, the average page response is in the 2–5 second range. |</p>

**Please provide an overview of the assessment for districts and BOCES. Please include:**

- A description of the assessment;
- A description of how the assessment is administered;
- A description of how scores are reported (include links to sample reports as appropriate);
- A description of how the Assessment Provider supports implementation of the assessment, including any technical assistance. (3 pages max)
**aReading (Adaptive Reading)** is a computer adaptive measure of broad reading ability that is individualized for each student and provides a useful estimate of broad reading achievement. The questions and response format used in aReading is substantially similar to many state-wide, standardized assessments. aReading is a simple and efficient procedure that is fully automated. Browser-based software adapts and individualizes the assessment for each child so that it essentially functions at the child’s developmental and skill level. The adaptive nature of the test makes it more efficient and more precise than paper-and-pencil assessments.

The design of aReading has a strong foundation in both research and theory. aReading was developed based on a skills hierarchy and unified reading construct. aReading is often used by teachers to screen all students and estimate annual growth with tri-annual assessments (fall, winter & spring). Benchmark Standards (i.e., “cut scores” or “targets”) are built into the system to assist in determining which students are at-risk for academic failure versus those who are on track to be successful. Students with deficit achievement are quickly identified for additional intervention. The data also identify and inform instructional decisions for on-track and high-performers.

aReading is intended for use from kindergarten through twelfth grades for screening. The aReading item bank consists of approximately 2,000 items that target Concepts of Print, Phonological Awareness, Phonics, Vocabulary, and Comprehension for grades K-5. Items developed for middle and high school target Orthography, Morphology, Vocabulary, and Comprehension. Please note, however, that the importance and emphasis on each reading domain will vary across children. Each assessment is individualized by the software and, as a result, the information and precision of measurement is optimized regardless of whether a student functions at, above or significantly below grade level. The domains of reading achievement measured by aReading are directly linked with the CCSS.

aReading is quick to administer, predictive of risk, and provides teachers with data to inform instruction. aReading is administered and scored with browser-based software. It may be administered individually or by group. Students are set-up with earphones and a laptop, desktop, or mobile tablet device. A teacher or other staff person logs into FAST, selects the student(s) name(s), and proctors the assessment. Administration and scoring are fully automated.

Reports are available to evaluate student performance against local norms, mastery criterion, and predictions of risk to meet proficiency standards on state tests. Reports provide a summary of student performance on a scale that spans grades 1 to 5. Student performance is on a scale of 150 to 700 with an average of 400. Benchmark/criterion standards are specified for each grade level, which are used to identify students at risk.

FAST provides information on student proficiency, as well as growth reporting over time. Our easy-to-generate, carefully structured reports are instantly available for teachers. These reports are instantly applicable to instruction, offering rich information about student strengths, areas needing improvement, and growth trends within and across school years. District Managers, School Managers, and Specialists within the FAST system may run grade-wide reports from the FAST Reports Manager. District Managers also have access to run reports for multiple schools in the district at once. In addition to the standard FAST reporting, FastBridge Learning offers additional ad-hoc and custom reporting capabilities via our “Off-Line Reporting” feature. These data may be exported for use in other systems if desired, and scheduled custom exports may be requested.

FastBridge Learning provides tailored options for training, professional development (PD), and ongoing learning that are designed to be efficient, effective, and engaging. We believe that in order for teachers to provide high quality instruction for their students, we must provide high quality professional development for our participants. We use multiple approaches to facilitate learning, including digital technologies, interaction, hands-on learning, small group activities, Q&A, live modeling, certification, and more to create a learner-centered environment that maximizes engagement and knowledge retention. Training and Professional Development Service Options delivered by FastBridge Learning Consultants:

- Onsite services in single or two-day packages designed specifically to provide guidance, instruction, and assistance to support action planning and implementation delivered in a train-the-trainer model.
- Webinar-style services: “Ask the Expert” consultation/training by-the-hour provides a flexible delivery model with affordable, just-in-time PD when you need it most.

The FAST Knowledge Base also offers extensive online support to users via a searchable database of written articles, screenshots, step-by-step tutorials, archived webinars, and tutorial videos about FAST. The Knowledge Base includes general FAQs, Getting Started Guides and Videos for all user roles in FAST, Archived Webinars, Login Access Guides, Overviews, FAQs, Data Interpretation Guides, and other Resources for each of the FAST measures, resources to support screening and progress monitoring set-up and administration, report guides, Benchmark and Norm information, and tools to support School Managers and District Managers. From the FAST Knowledge Base, users may also submit a request for assistance from our School Support team either via email or using the Knowledge Base’s “Live Chat” feature (available during business hours).
Please provide an overview of the student-level growth model or target setting model for SLOs for districts and BOCES, along with how student-level growth scores are aggregated to the create teacher-level scores, and how those teacher-level scores are converted to New York State’s 0-20 metric.

Educator effectiveness was estimated for evaluation purposes using medians of SGP, i.e., median growth percentiles (MGP), for those students associated with a given educator. MGP are expressed on the same metric as SGP, and, like SGP, range from 0.01 to 0.99. MGP can then be converted to an Annual Professional Performance Review score (APPR) using the crosswalk tables presented below for each assessment. APPR values are also linked to HEDI ratings (4 = highly effective, 3 = effective, 2 = developing, and 1 = ineffective). Note that these crosswalk tables are based on preliminary norming data for educators, and will be updated at the completion of the 2015/2016 and annually thereafter based on norming data.

An aReading crosswalk table is provided on page 30 of the Growth Report in Appendix A-1. APPR scores were assigned to educator median growth percentiles (MGP) so that a HEDI rating of “Ineffective” corresponded to APPR scores from 0 to 12, “Developing” corresponds to APPR scores from 13 to 14, “Effective” to APPR scores from 15 to 17, and “Highly Effective” to scores from 18 to 20. Based on this crosswalk, MGP for the “Ineffective” category extend to 0.59, and MGP for “Developing” then extend from 0.60 to 0.74. “Effective” MGP range from 0.75 to 0.89, and “Highly Effective” MGP range from 0.90 to 0.99.

The FAST online system handles the administration and scoring of assessments and reporting of results. Norming data collected during the 2015/2016 school year will be integrated into the online reporting functionality prior to the 2016/2017 school year. Student growth estimates over screening periods will be reported with standard errors, and SGP will be provided for any students enrolled for at least 70% of the school year having fall and spring assessment scores. Educators having SGP results from at least 15 students meeting these criteria will then be provided with MGP APPR scores, and HEDI ratings using updating crosswalk tables.

For additional details, please reference Formative Assessment System for Teachers: Growth Modeling for Educator Evaluation submitted as part of Appendix A.

**New York State Next Generation Assessment Priorities**

Please provide detail on how the proposed supplemental assessment I or assessment to be used with SLOs addresses each of the Next Generation Assessment Priorities below.

<table>
<thead>
<tr>
<th>Characteristics of Good ELA and Math Assessments (only applicable to ELA and math assessments):</th>
<th>The aReading assessment is consistent with best practices in measuring the New York State Learning Standards in ELA. Reliability and validity evidence supports the use of aReading for the purpose of measuring student growth across the following domains, which are aligned with NYS standards in English Language Arts: Concepts of Print, Phonological Awareness, Phonics, Vocabulary, and Comprehension. Orthography, Morphology, Vocabulary, and Comprehension. aReading item development followed the process and standards presented by Schmeiser and Welch (2006) in the fourth edition of Educational Measurement (Brennan, 2006). Research assistants, teachers from each grade level (1st through 5th), and content experts in the area of reading served as both item writers and reviewers for</th>
</tr>
</thead>
</table>
those items at the Kindergarten through 5th grade level. Items for grades 6 through 12 were constructed to reflect the Common Core State Standards’ specifications for various skills of interest, as well as the National Assessment of Educational Progress’ guidelines for reading assessment items. After items were written they were reviewed for feasibility, fairness, construct relevance, and content balance. A stratified procedure was used to recruit a diverse set of item writers from urban, suburban and rural areas. The item writers wrote, reviewed, and edited assessment materials. Item writing for aReading was a multi-year, collaborative, and iterative process. First the literature on item writing guidelines typically used in developing assessments was reviewed. Next, the literature on multiple-choice item writing was reviewed. Once the literature was reviewed, the guidelines were applied to aReading to examine relevance and utility. Extensive guidelines were provided to item writers and the process outlined above was followed. The aReading project uses a research-based skills hierarchy and unified construct of broad reading achievement to establish an instructionally relevant assessment. The importance and emphasis on each component skill (domain) varies across children. Each assessment is individualized by the aReading software and built-in assessment algorithms. As a result, the information and precision of measurement is optimized regardless of whether a student functions at, above, or below grade level (i.e., same age and grade peers). The grade labels and content balancing that are proposed in the a-priori model derive from the recommendations of expert panels and are subject to empirical evaluation and refinement. Additional information about aReading item development is included in the Technical Manual submitted with Appendix A.

**Assessments Woven Tightly Into the Curriculum:**

We believe the best assessments are those that are able to be seamlessly administered in conjunction with regular classroom instruction and in support of the day-to-day academic goals of the teacher. Designed for Multiple Systems of Support (MTSS) and Response to Intervention (RtI), FAST makes program implementation easy and efficient with automated scoring, analysis, norming and reporting; customizable screening, benchmarking, instructional recommendations and progress monitoring.

Immediate, on-demand reporting within FAST provides actionable data specifically designed to guide instruction and remediation. Our assessments help teachers collect data that answer their critical questions about student skills, instructional needs, and growth at the student, group, class, grade, school, and district levels. A variety of reports are provided to inform instruction. FAST assessments yield reports with scores compared to color-
coded norms (class, school, district, national) and benchmarks (high risk, some risk, low risk that predict state test performance). Norms and benchmarks are available for both level of achievement and rate of growth. Rate of growth norms are provided for aggregated (all students) and disaggregated (high, typical, low achieving). These results are presented in automated reports. Reports help evaluate district, school, grade, and teacher level success.

**Performance Assessment:**

Reliability and validity evidence supports the use of aReading for the purpose of measuring student growth across the following domains, which are aligned with NYS standards in English Language Arts: Concepts of Print, Phonological Awareness, Phonics, Vocabulary, and Comprehension. Orthography, Morphology, Vocabulary, and Comprehension.

The FAST assessments are evidence-based. Numerous studies were completed with diverse samples of students across many geographic locations and LEAs (e.g., NY, GA, MN, IA, and WI). Consistent with the definitions of “evidence-based,” there are many large, multi-site studies with student samples from the populations and settings of interest (i.e., K–12 students). The samples size for almost all studies well-exceeded the requirement of 50 students per condition (e.g., assessment, grade, LEA, instructional condition). On aggregate, more than 15,000 students participated in well-controlled psychometric research. In addition, norms were developed from samples of approximately 8,000 students per grade (K to 8th) per assessment, which aggregates to 72,000 student participants. Consistent with the requirements for evidence, the psychometric qualities for reliability and validity were statistically significant, and the various assessments are meaningful and statistically robust indicators of relevant outcomes, such as state tests and future performance in school.

FastBridge Learning uses standard setting processes to summarize student performance. Standards may be used to inform goal setting, identify instructional level, and evaluate the accuracy of student performance. The FastBridge Learning software provides various resources to assist administrators with test result interpretations. For example, a Visual Conventions drop down menu is available to facilitate interpretation of screening and progress monitoring group and individual reports. Percentiles are calculated for local school norms unless otherwise indicated. Local school norms compare individual student performances to their same grade and school peers. Methods of notation are also included to provide information regarding those students predicted to be at risk. Exclamation marks (! and !!) indicate the level of risk based on national norms. One exclamation mark
Interpreting FastBridge assessment scores involves a basic understanding of the various scores provided in the FastBridge Learning software and helps to guide instructional and intervention development. FastBridge Learning offers individual, class, and grade level reports for screening, and individual reports for progress monitoring. Additionally, online training modules include sections on administering the assessments, interpreting results, screen casts, and videos. Results should always be interpreted carefully considering reliability and validity of the score, which is influenced by the quality of standardized administration and scoring. It important to consider the intended purpose of the assessment, its content, the stability of performance over time, scoring procedures, testing situations, or the examinee. The FastBridge Learning system automates analysis, scoring, calculations, reporting and data aggregation. It also facilitates scaling and equating across screening and progress monitoring occasions.

**Efficient Time-Saving Assessments:**

Students typically complete the aReading assessments in 15-30 minutes, reducing testing time by up to 50-95% compared to traditional tests. Our extensive research has enabled the aReading test of 30 items to replace a traditional 100-item test, with high accuracy and actionable results.

**Technology:**

aReading can be group administered in a computer lab setting, or a student can complete an administration individually at a computer terminal set up in a classroom, or with the use of a tablet device. aReading test sessions typically last 10 to 30 minutes, depending on grade, student ability, and other factors. The test terminates on its own informing students they have completed all items. aReading administrations are typically completed following 30 items.

FAST™ is a web-based, hosted SaaS solution. As such, with no hardware or software to install, implementing FAST™ is simple. FAST™ requires no network or computer-based installation. Our cloud-based system is easy to implement and supported with optional automated rostering and SIS integration, nothing to install or maintain, and multi-platform and device support.

For optimal performance, schools must have sufficient bandwidth for aReading. Performance testing has shown that 75Mbps of available bandwidth is optimal if a school district planned to test 500 students simultaneously on aReading. At this range, the average page response is in the 2–5 second range. At lower speeds, the latency is significantly higher and schools may have technical issues.
Degree to which the growth model must differentiate across New York State's four levels of teacher effectiveness (only applicable to supplemental assessments):

| aReading can be used to support teacher and principal evaluations in grades 1 through 6. Student scaled scores are converted to student growth percentiles (SGP) using national norming data, including students from NY schools. Student SGP are aggregated by educator and then converted to APPR scores and HEDI ratings.

An aReading crosswalk table is provided on page 30 of the Growth Report in Appendix A-1. APPR scores were assigned to educator median growth percentiles (MGP) so that a HEDI rating of “Ineffective” corresponded to APPR scores from 0 to 12, “Developing” corresponds to APPR scores from 13 to 14, “Effective” to APPR scores from 15 to 17, and “Highly Effective” to scores from 18 to 20. Based on this crosswalk, MGP for the “Ineffective” category extend to 0.59, and MGP for “Developing” then extend from 0.60 to 0.74. “Effective” MGP range from 0.75 to 0.89, and “Highly Effective” MGP range from 0.90 to 0.99. |
Please read each of the items below and check the corresponding box to ensure the fulfillment of the technical criteria outlined in the Technical Application on “FORM B-2”.

PLEASE SUBMIT ONE “FORM G” FOR EACH APPLICANT. CO-APPLICANTS SHOULD SUBMIT SEPARATE FORMS.

### COMPLETE THIS SECTION:

#### 2.2(A) Narrative Overview of Proposed Supplemental Assessment and Associated Growth Model

This application contains a short overview of the assessment being proposed, including the intended purpose of the assessment, and how the assessment is administered.

For supplemental assessments, this application contains a description of the growth model and how it is used in conjunction with the assessment.

For K-2 assessments, this application contains evidence that the proposed assessment is consistent with this RFQ’s requirement that the assessment not be a “Traditional Standardized Assessment” as defined above in the section “Definitions of Key Terms Used in this RFQ.”

- [ ]
- [ ] N/A
- [ ]

#### 2.2(B) Evidence of Capability

This application provides an overview of services provided by the Assessment Provider, including a description of the range of support / technical assistance that the Assessment Provider would provide to an LEA if selected by an LEA for this service.

This application contains information as to whether the Applicant or Assessment Provider has been denied approval as a provider of assessment services in another state(s) and the reason(s) for such denial. If denied within New York State, the location and reason are indicated.

- [ ]
- [ ] N/A

#### 2.2(C): Evidence of Copyright Owner/Assessment Representative History of Assessment Development

This application contains evidence that the Copyright Owner/Assessment Representative has a history of developing assessments of student learning (achievement or growth) for the purpose of making defensible judgments about educator effectiveness.

- [ ]
- [ ] N/A
### 2.2(D)-i: Technical Documentation Related to Assessment and Student Growth Score Properties: RELIABILITY

*Both “minimum” and “desired” qualifications are listed. For the purposes of this RFQ, applications will only be rated against the “minimum” qualifications; however, NYSED’s aspirational “desired” qualifications are also listed to identify possible future requirements for assessments and associated growth models.*

For supplemental assessments used in conjunction with growth models:

This application contains evidence of the **minimum** criteria for reliability:
- Student test scores have adequate levels of reliability (e.g., coefficient alpha > 0.75).

This application contains evidence of the **desired** criteria for reliability:
- Standard errors provided for students growth scores.
- Student growth classifications have adequate decision consistency.
- Teacher effectiveness classifications demonstrate adequate consistency.

*Examples include agreement statistics (e.g., kappa coefficients) based on simulation studies.*

### 2.2(D)-ii: Technical Documentation Related to Assessment and Student Growth Score Properties: VALIDITY – ALIGNMENT

*Both “minimum” and “desired” qualifications are listed. For the purposes of this RFQ, applications will only be rated against the “minimum” qualifications; however, NYSED’s aspirational “desired” qualifications are also listed to identify possible future requirements for assessments and associated growth models.*

For supplemental assessments used in conjunction with growth models:

This application contains evidence of the **minimum** criteria for alignment validity:
- Evidence that test content is sufficiently aligned with New York State Learning Standards and covers a range of measurable standards.
- Documentation that demonstrates that:
  - (a) at least 80% of the test measures content aligned with NYS learning standards,
  - (b) no more than 20% of test content is aligned with other learning standards or objectives, and
  - (c) a range of content from the NYS learning standards is measured

*Note: Other relevant standards can be proposed if NYS Learning Standards do not apply to subject area.*

This application contains evidence of the **desired** criteria for alignment validity:
- 100% alignment between NYS Learning Standards and assessment.

### 2.2(D)-iii: Technical Documentation Related to Assessment and Student Growth Score Properties: VALIDITY – RELATIONS TO OTHER VARIABLES

*Both “minimum” and “desired” qualifications are listed. For the purposes of this RFQ, applications will only be rated against the “minimum” qualifications; however, NYSED’s aspirational “desired” qualifications are also listed to identify possible future requirements for assessments and associated growth models.*

For supplemental assessments used in conjunction with growth models:

This application contains evidence of the **minimum** criteria for validity in relation to other variables:
- Evidence students’ growth scores are correlated with other measures of student progress (e.g., $r > .5$ with measures such as the number of objectives}

### Check all that apply:

- [ ]
- [ ]
- [ ]
- [ ]
- [ ]
mastered by a student over the course of the year, teachers’ ratings of students’ progress, or scores from other assessments).

This application contains evidence of the desired criteria for validity in relation to other variables:
- Evidence teacher effectiveness ratings are positively correlated (e.g., r > .5) with other measures of teaching effectiveness.

### 2.2(D)-iv: Technical Documentation Related to Assessment and Student Growth Score Properties: VALIDITY – INTERNAL STRUCTURE

Both “minimum” and “desired” qualifications are listed. For the purposes of this RFQ, applications will only be rated against the “minimum” qualifications; however, NYSED’s aspirational “desired” qualifications are also listed to identify possible future requirements for assessments and associated growth models.

For supplemental assessments used in conjunction with growth models:
This application contains evidence of the minimum criteria for validity of internal structure:
- Scale properties appropriate for growth model used (*see notes*). Total scores and subscores on student assessments should be supported by dimensionality analyses (e.g., IRT residual analyses, factor analyses).

This application contains evidence of the desired criteria for validity of internal structure:
- Evidence students’ scores are on an interval scale.

*Notes: If gain score model is used, evidence is needed that students’ pretest and posttest scores are on the same scale. If student growth percentile model used, justification for the number of years included in the model should be provided. If growth-to-proficiency, projection, or value-added models are used, evidence is needed that the model explains a significant amount of variability in student achievement. Also, models should demonstrate robustness to missing data.

### 2.2(D)-v: Technical Documentation Related to Assessment and Student Growth Score Properties: UTILITY AND COMPREHENSIBILITY

Both “minimum” and “desired” qualifications are listed. For the purposes of this RFQ, applications will only be rated against the “minimum” qualifications; however, NYSED’s aspirational “desired” qualifications are also listed to identify possible future requirements for assessments and associated growth models.

For supplemental assessments used in conjunction with growth models:
This application contains evidence of the minimum criteria for utility and comprehensibility:
- Technical documentation that describes how student growth and educator effectiveness are calculated.

This application contains evidence of the desired criteria for utility and comprehensibility:
- Student growth reports support instructional improvement. Resources and supporting materials available to the field.

### 2.2(E)-i: Technical Documentation Related to Aggregating Student-Level Growth Scores to Teacher-Level Scores: CREATION OF TEACHER LEVEL SCORES

For supplemental assessments used in conjunction with growth models:
This application includes a narrative description of how student-level scores are aggregated to create a single teacher-level score for each teacher.
2.2(E)-ii: Technical Documentation Related to Aggregating Student-Level Growth Scores to Teacher-Level Scores: EXCLUSION RULES

This application includes a description of any exclusion rules that remove students associated with a given teacher from the teacher’s teacher-level score (either through a growth model or in conjunction with an SLO).

2.2(F): Technical Documentation Related to Converting Teacher-Level Growth Score to New York State’s 0-20 APPR Scale

This application includes a crosswalk that maps scores on the assessment’s aggregated teacher-level growth score to the required New York State teacher and principal evaluation metric, which ranges from 0-20.

This application includes procedures for converting teacher-level growth scores to the 0-20 APPR scale comply with the New York Standards for each evaluation rating category, which are based on the following definitions.

For supplemental assessments used in conjunction with growth models:

This application includes an explanation of the assignment of HEDI rating categories based on the following ranges:

- **Highly Effective**: results are well-above State average* for similar students
- **Effective**: results meet State average* for similar students
- **Developing**: results are below State average* for similar students
- **Ineffective**: Results are well-below State average* for similar students

2.2(G)-i: Technical Documentation Related to Fairness: TEST TAKERS

Consistent with the new Testing Standards (2014), there is an increased focus in the industry on fairness of assessments and their uses. Please provide evidence of fairness for both the proposed assessment and, if applicable, the proposed growth model.

This application includes evidence that the proposed assessments are fair to all test takers (e.g., Differential Item Functioning [DIF] / bias information, fairness evaluation / sensitivity review plan.)

2.2(G)-ii: Technical Documentation Related to Fairness: TEACHER GROWTH SCORES

This application includes evidence of fairness of the proposed aggregated teacher growth scores (e.g., lack of correlation between aggregated teacher growth scores and student demographics).

The evidence of fairness of the proposed aggregated teacher growth scores includes an explanation of how the growth model incorporates (a) prior academic history, (b) poverty, (c) students with disabilities, and (d) English language learners.
To be completed by the Copyright Owner/Assessment Representative of the assessment being proposed and, where necessary, the co-applicant LEA:
